

TIMOTHY WASHINGTON II

Software Engineer · Java / Spring Boot / Angular · AWS Certified · Prairie Grove, AR ·
tim.washington888@gmail.com · github.com/githubster808 · linkedin.com/in/tim-washington · [Portfolio](#)

SUMMARY

A driven and relentless software engineer (Java/Spring Boot + Angular) and April 2026 WGU graduate, bringing three years of enterprise IT operations experience at the University of Arkansas. AWS Certified Cloud Practitioner and CompTIA Project+ certified. Proficient in object-oriented design, REST API development, and documentation-based coding practices, with exposure to CI/CD pipelines, automated testing, and aware of agile methodologies. Comfortable leveraging generative AI tools to enhance development efficiency. Seeking a collaborative, cross-functional engineering environment where I can contribute meaningfully, grow alongside a team, and apply an engineering mindset to every challenge.

TECHNICAL SKILLS

Languages Java, Python, TypeScript, JavaScript, SQL, HTML5, CSS3, XML

Databases PostgreSQL, MySQL, SQLite, Room (Android)

Networking TCP/IP, DNS, VLANs, Aruba switching, Layer 3

Methods REST APIs, OOP, MVC, Repository pattern, unit testing

Frameworks Spring Boot, Angular, Node.js, Maven, Bootstrap

Cloud / Infra AWS (CCP), Docker, Infoblox, LogicMonitor, Auvik, NetDisco

Tools IntelliJ IDEA, VS Code, PyCharm, Android Studio, Git, GitLab

Certifications AWS Cloud Practitioner, ITIL Foundation, CompTIA Project+

FEATURED PROJECTS

Destination Discovery — *Android vacation planner* [APK ↗](#)

Java · Android SDK · Room (SQLite) · DAO · RecyclerView

- › **Built a full-featured Android vacation planner** letting users create trips, add excursions within date constraints, and trigger scheduled notifications via SMS and email intents.
- › **Architected the data layer with Room (SQLite)** using the Repository pattern and custom DAO queries to keep UI code independent of database logic.
- › **Implemented date-range validation and input sanitization** across forms to prevent invalid trip configurations and reduce SQL injection risk.
- › **Shipped CRUD, search, filtering, and reporting features** backed by RecyclerView adapters and reusable utility classes, with unit-tested core logic.
- › **Managed the project in Git/GitLab** with deployment of the Android SDK build via GitHub Pages and Logcat-driven debugging.

Java Spring + Angular Full-Stack Application

Java · Spring Boot · Angular · PostgreSQL · Docker · REST · Maven

- › **Built a layered Spring Boot backend** (controllers → services → repositories) exposing a RESTful API with structured JSON contracts and consistent error handling.

- › **Wired the Angular frontend to the API** over HTTP with typed models, reactive forms, and reusable components.
- › **Containerized the full stack with Docker** so frontend, backend, and PostgreSQL come up with a single command for local development.
- › **Applied OOP principles and global exception handling** to keep the API surface predictable and safe under bad input.

Taniti Interactive Prototype — *responsive multi-page frontend* [Live ↗](#)

[HTML5](#) · [CSS3](#) · [JavaScript](#) · [responsive layout](#) · [semantic markup](#)

- › **Designed and built a responsive multi-page prototype** with semantic HTML5 and modern CSS (flexbox, grid, media queries), shipped via GitHub Pages.

PROFESSIONAL EXPERIENCE

Network Support Technician *Apr 2023 — Present*

University of Arkansas

- › **Configure and manage Layer 3 network infrastructure** across a multi-building campus, including VLAN segmentation via Aruba CLI and Juniper Mist Systems.
- › **Administer DNS and IP address allocation using Infoblox**, sustaining accuracy and system reliability for faculty, staff, and student systems.
- › **Monitor network and host health with Mist, LogicMonitor, Auvik, and NetDisco**; partner with engineering teams to identify root cause on recurring outages.
- › **Troubleshoot performance issues end-to-end** — from physical layer through network layer — and document each fix path so it survives the next on-call rotation.
- › **Maintain technical documentation and process diagrams** used across the broader IT team.

Whole Health Coach/Social Science Program Coordinator *Aug 2021 — Sep 2022*

Veterans Healthcare System of the Ozarks

- › **Coordinated program operations** and improved delivery efficiency through clear documentation and cross-team communication.
- › **Handled sensitive participant data** in accordance with VA security and compliance standards.
- › **Collaborated across clinical, administrative, and program teams** to keep training resources aligned and on schedule.

EDUCATION & CERTIFICATIONS

B.S. Software Engineering

Western Governors University · *April 2026*

Software development, OOP, web & mobile dev, software design, databases, architecture.

B.S. Psychology

Utah Valley University · *December 2020*

Neuroscience, motivation & emotion, personality, scholarly research methods.

Certifications: AWS Certified Cloud Practitioner · ITIL Foundation · CompTIA Project+
